

I. Statement of the Problem

Despite Filipino being the national language, there is a documented "Learning Poverty" crisis in the Philippines. Current data shows that elementary students are increasingly "functionally illiterate" in formal Filipino. While they can speak "Taglish" or informal slang, they fail to meet the **KWF (Komisyon sa Wikang Filipino)** standards for spelling and vocabulary, leading to low academic performance in the Filipino subject.

II. Review of Related Literature and Studies (RRL/RRS)

1. National/Regional Scale: SEA-PLM 2024 (National Report of the Philippines)

The **Southeast Asia Primary Learning Metrics (SEA-PLM)** is the most authoritative assessment of Grade 5 literacy in the region.

- **Finding:** The 2024 National Report reveals that **27% of Filipino Grade 5 students** remain in the lowest proficiency bands. These students can only identify single words but cannot comprehend sentences or instructions in Filipino.
- **The Spelling Gap:** The report emphasizes a "Writing Literacy" deficit, where **46% of students** struggle with **orthography (spelling)** and correct vocabulary usage.
- **Impact on HusayBaybay:** This study justifies the inclusion of **Audio Pronunciation** and **Spelling Exercises**, as the data shows students cannot bridge the gap between hearing a word and spelling it correctly according to national standards.
- **The Problem:** Students are "decoding" without "understanding."
- **Our Solution:** By integrating a **Mini Dictionary** directly into the spelling process, **HusayBaybay** ensures that the learner isn't just memorizing a sequence of letters. They are building a semantic connection between the word's spelling and its definition.

2. Local Classroom Scale: Phil-IRI Accomplishment Report (S.Y. 2024–2025)

The **Philippine Informal Reading Inventory (Phil-IRI)** is the localized tool used by teachers to assess reading levels.

- **Finding:** Recent reports from the current school year (2024–2025) indicate that over **40% of elementary pupils** are categorized under the **"Frustration Level"** in the Filipino subject.
- **The Comprehension Crisis:** Students at this level can "decode" (read sounds) but cannot define the words.
- **Impact on HusayBaybay:** This validates the **Mini Dictionary** feature of your app, which provides brief definitions to ensure that students are not just spelling words, but understanding their meanings.

- **The Problem:** The "sounds" of modern Tagalog are often influenced by "Taglish" or informal slang, leading to errors in formal writing.
- **Our Solution:** The **Audio Pronunciation feature** acts as a corrective auditory guide. By hearing the formal, correct pronunciation and then being required to type the spelling, the student reinforces the "standard" version of the language, effectively "overwriting" informal habits.

3. Linguistic Context: Herrera et al. (2024) – "Digital Disconnect"

- **Finding:** A local study on spelling proficiency found that the rise of social media and "shorthand" texting (Taglish/Jejemon) has eroded the spelling skills of elementary learners. Students have stopped consulting dictionaries and are losing mastery of formal Filipino spelling.
- **Impact on HusayBaybay:** This research supports the "Interactive Game" approach of the app. By gamifying KWF-standard spelling, **HusayBaybay** re-introduces formal language in a format that competes with the digital distractions students face today.
- **The Problem:** A lack of exposure to **KWF (Komisyon sa Wikang Filipino)** standards outside of a traditional, often "boring" textbook.
- **Our Solution:** **HusayBaybay** bridges this gap by using a mobile platform—the same medium responsible for the "shorthand" habit—to reintroduce formal orthography. It meets the students where they are (on a phone) but provides them with the correct academic tools.

III. Alignment Table: Problem vs. Solution

Documented Problem (RRL/RRS)	HusayBaybay Feature (Solution)
Low Word Recognition (SEA-PLM)	Audio Pronunciation Game – Connects auditory sounds to correct KWF spelling.
40%+ "Frustration Level" (Phil-IRI)	Mini Dictionary – Provides definitions to move students from decoding to understanding.
Orthography/Spelling Deficit (EDCOM 2)	Spelling Drills – Repetitive exercises to master the correct arrangement of Filipino letters.

Informal Slang/Jejemon Shift (Herrera)	KWF-Standard Content – Ensures students learn "Ortograpiyang Pambansa" (National Orthography).
